

SUMMARY

Driven and adaptable Computer Science student with a strong foundation in C++, Object-Oriented Programming (OOP), and Data Structures & Algorithms. Possesses hands-on experience in front-end web development, database querying (SQL), and a proven problem-solving mindset. Additionally, holds a strong interest in AI engineering and autonomous agents, actively exploring local model deployment and workflow automation with n8n.

PROJECTS

Apple Website Clone

Developed a front-end clone of the Apple website utilizing HTML and CSS to replicate a modern, high-quality user interface. Successfully deployed the static web application on Vercel for live web access. Demonstrated strong attention to detail and an understanding of web design layout and structure. Currently optimized for Desktop viewing.

Console-Based Car Game (C++)

Designed and developed an interactive, console-based racing game using C++. Applied core Object-Oriented Programming concepts (classes, inheritance, encapsulation) to manage game state, vehicle behavior, and user interactions. Troubleshooted and debugged code to ensure smooth rendering and gameplay loops within the console environment.

GPA & CGPA Calculator (C++)

Built a robust GPA and CGPA calculator application to process and evaluate student grading data. Implemented efficient mathematical logic and conditional formatting to accurately calculate weighted averages based on user input.

Arik. Framer (Clone)

Engineered a responsive, high-performance web developer portfolio clone. Built with SCSS and deployed on Vercel, focusing on modern UI/UX design principles and cross-browser compatibility.
